

Pros and Cons of Studying Art

Art is not usually a subject that you will choose to study unless you hold a dedication and passion for the subject. Having a creative flair is something that some are fortunate to have, which can lead to very successful careers. Having such a passion and love for the subject will make studying it that much easier, rather than it being a chore to study and complete coursework on time it will be something that you want to do.

Not only will you be able to develop your artistic skills but you will also be able to develop other skills that will help you later in life. You will learn the art of essay writing, good communication skills and IT literacy to name but a few! Not only will you develop your practical skills, but your theory also. You will get to learn about other artists and cultures along the way.

Of course, if art isn't your strongest point then this possibly isn't the right subject for you, but there are plenty out there that will be. Art is a very hands on subject, and will take up a lot of your time when constructing your latest piece. You need to be patient and dedicated to the subject in order to succeed.

Studying art in the UK has an added bonus as you will be able to visit London, which is deemed by many to be a very creative capital. And it is also home to the V & A (Victoria and Albert); the world's greatest museum of art and design.
